#### **DETAILED ACTION**

### Response to Arguments

1. Applicant's arguments with respect to claims 59-63 have been considered but are most in view of the new ground(s) of rejection.

### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 59 and 61-63 are rejected under 35 U.S.C. 102(e) as being anticipated by US Publication No. 2006/0106293, US Application No. 10/507,336 to Fantini. ("Fantini")
- 4. Regarding Claims 59 and 63, Fantini teaches a method of displaying spectral data corresponding to a tissue, the method comprising: scanning a series of points within the tissue with radiation (Page 4 Paragraph 0054 and Claim 1); detecting radiation reflected from the tissue (Claim 1); processing the detected radiation to generate a set of numbers wherein each number in the set characterizes a different point of scanned tissue; and converting the set of numbers into a continuous grade output that characterizes the tissue without a threshold. (Fig. 3-5; and Fig. 24 A1, A2, B1 and B2)

Page 3

Application/Control Number: 10/635,330

Art Unit: 3768

- 5. Regarding **Claim 61**, Fantini teaches that the the continuous grading is represented by a gray scale or different tones, pitches, or volumes of sound. (Fig. 3-5; and Fig. 24 A1, A2, B1 and B2)
- 6. Regarding **Claim 62**, Fantini teaches that the radiation is near-infrared radiation. (Page 2 Paragraph 13)

## Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 8. Claim 60 rejected under 35 U.S.C. 103(a) as being unpatentable over US Publication No. 2006/0106293, US Application No. 10/507,336 to Fantini. ("Fantini")
- 9. Regarding Claim 60, Fantini teaches all of the above claimed limitations but does not expressly teach that the continuous grading is represented by false color scale.
- 10. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Fantini such that the continuous grading is represented by a false color scale, since Fantini discloses using gray scale grading technique, and false color scale and gray scale are very well known grading techniques which have been around for many years.

#### Conclusion

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sanjay Cattungal whose telephone number is (571)272-1306. The examiner can normally be reached on 9:30 - 5:00 pm.

- 12. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eleni Mantis-Mercader can be reached on (571)272-4740. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
- 13. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
